

Invoice Processing System

UX Challenge

**MONARCH PRATCHA**

[www.mohampatcha.com](http://www.mohampatcha.com)

A company is getting invoice from multiple locations, in multiple ways with multiple formats. Company wants to have centralised location, where user can submit invoices in easy manner by avoiding the different invoice formats. Also making sure the invoice processing is very smooth

**Users**

Vendors, Finance people, Invoice processing people

My research points after understanding the scope

Process Step 1:

- Getting invoice in multiple formats
- Some vendors sending same invoice multiple ways
- If there is options for vendors to create invoices easily
- System should provide a template of invoice where company can accept
- Processing manager should receive a notification about new invoices,  
Invoice status
- Time to reduce for processing a invoice
- Vendor should know about invoices payment states
- Need to have 360 Degree view of invoice for every user

Empathise

My research points after understanding the scope

Process Step 2:

- Different invoice format problem
- Duplicate invoice problem
- Maintain single format for venders
- Invoice every stage status notification

**Defnre**

# Solution:

- Web& Mobile application can solve
